

# Fusion ORGAN by kpr

Version 1.0

## New instruments library for Alesis Fusion 8HD/6HD

The "Fusion ORGAN by kpr", a new sample library including a Program Presets Bank for Alesis Fusion 8HD/6HD!

This new product turns the Fusion into an organ. To simulate the typical organ drawbars setting ability and performance elements the concerning Presets are designed to make that very easy for everyone who want to play on the Fusion like on an organ.

How it works: The Control Knobs 1-3 are assigned with single drawbars or combinations of drawbar settings, percussion and additional registers for typical organ layers. When playing the Preset you can add the related drawbar setting by turning the Control Knob. There is a standard Controller setting for all other organ effects: Pitch Bend for overdrive, Modulation Wheel for loudness dynamics, SW1 Switch for Rotary Speaker fast speed and Control Knob 4 for Reverb intensity. The church organ Presets Controller setting is slightly different to simulate their register options.

- 30 new instrument samples. A large variety of Organs with samples taken from following instruments: Hammond B3, C3 and M100, Korg CX3, the Vintage Organs Farfisa Compact, Siel Cruise, Hohner String Melody II, the Ensemble keyboards Yamaha SK30, Korg Lambda, as well as Organs and organ type sounds created with the analog and digital synthesizers Minimoog, Korg Polysix, Trident MkII, Poly 800 and DW8000 and Mellotron organ multisample and Church Organ as well as Portable Keyboard organ from the early 80ies. Library size 80 MB.

- 88 Program Presets: Layers and single instruments. Sophisticated Controller programming for Control Knobs 1-4, Modulation Wheel, Aftertouch, Pitch Bend. The Presets are considering the new samples as well as the internal ROM organ samples.

- Archive Program Presets (additional library handling tool)

Price: Euro 39,--, download product (optional CD), size 80 MB, zip data package.

This is the perfect addition to the other already available Fusion Sample libraries by kpr!
