Arturia MiniV Presets by kpr

Program Presets Bank for Arturia MiniV Software Synthesizer

64 new Presets for quick access: Typical Lead Synth and Synth Bass sounds, that is what the original Minimoog is famous for since decades. For details see listing below.

During sound production, an original Minimoog was used standing to the side to create sounds for the Arturia MiniV to ensure the typical and very similar character.

Mail data attachment product. Perfect for all stage and studio purposes, ready-to-use and produce.

The 64 completely new designed Arturia MiniV monophonic Presets are re-released now for this virtual analog software synthesizer. The sounds are the perfect source basis for a real Minimoog classics recreation with the famous Arturia MiniV. The 64 monophonic Presets are programmed by using the new Arturia MiniV parameters and saved as bank to import them.

Data handling

Use the Arturia MiniV Import function to load the soundbank.

Program Soundbank

Note: Some Presets names may appear abbreviated in the Arturia MiniV menu.

Tip: The creator of these sounds has also published the Minimoog Classics Patch Book. It contains over 100 patch charts that can also be used for the Arturia MiniV. Most of the sounds are also available as audio files, allowing you to compare the original Minimoog sounds directly with the Arturia MiniV preset replicas.
